

- 1) What is the line size ?

- 2) What type of end connections are required (threaded, flanged, mechanical joint)?

- 3) What is the material the valve will be handling ?

- 4) What is the process line pressure and temperature ?

- 5) What material of construction (what it is made of) is required for the body, liner & plug?

- 6) What kind of an actuator does the valve need to have (manual, air actuator, electric) ?

- 7) If an air actuator is requested, what is the air supply pressure ? Does it require a fail position? Does it need a solenoid valve? Does it need limit switches? What NEMA class does it require?

- 8) If an electric actuator is requested, what is the supply voltage (24VDC; 120VAC) ? Does it require a fail position? Do they need an internal heater (outside application)? What NEMA class does it require?
